### Course List Application:

Build a course list application with React, Redux and Rest API. Follow the below mentioned steps to build the application

- a) Make use of JSON server to create a static API (containing courses JSON data). Create a separate action for calling API
- b) Under each course there must be enquire button
- c) On clicking enquire button, a form should be displayed. Here user should be able to type their details
- d) On clicking the submit button the user information should be added to json file
- e) Also create one more tab- 'Enquires' where users can leave their details to clear their doubts
- f) Make use of reducer to maintain the state of application

(Note: You can make use the Assignment 3 application code, add it redux functionalities to complete Assignment 4)
